

HEXBUG® Ant Micro Robotic Creatures

The **HEXBUG**® Ant is an autonomous, high-speed micro robotic creature with probing, tactile antennas and hooked claws. The industrious critter features front and rear touch sensors that allow it to maneuver around objects in its path and wheel-legs that propel it forwards, backwards and over small obstacles with furious speed. The HEXBUG Ant has an inner body loaded with robotic intelligence, protected by a hard, transparent exoskeleton casing.

How does it work?

The **HEXBUG** Ant traverses the ground beneath it until running into an object in its path, at which point the bug reverses and scurries away in the opposite direction. Two button cell batteries are included.

Fits in the palm of your hand for miniature fun at anytime!

- Product Length: 6 centimeters
- Product Width: 5 centimeters
- Product Height: 2.5 centimeters
- Product Weight: .044 lb

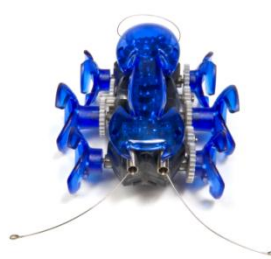

Available in an assortment of five translucent colors including Red, Green, Blue, Orange and Pink
