

## HEXBUG® Nano Newton Collection

The **HEXBUG Nano** is a tiny, collectible, micro robotic creature that uses the physics of vibration to propel forward and explore its environment. Powered by a tiny motor, and 12 fixed, angular legs, the industrious critter traverses the ground beneath it and quickly navigates through the most complex mazes. Possessing an uncanny sense of balance, it can even flip to its feet and zoom forward when turned on its back! When coming into contact with an object in its path, the energetic insect will switch directions and scurry away on a new path due to its persistent random behavior.

The **HEXBUG Nano** family is diverse and includes several unique “collections” and “series”, named after the world’s most accomplished scientists and their key discoveries. The Newton Collection includes five distinct “series” of HEXBUG Nanos, with each series representing a key scientific discovery. There are also rare mutations that can be found within each series.

Each **HEXBUG Nano** is assigned a unique serial number and point value system that owners can use to register their Nano collection online, hunt for rare creatures with the highest point values, play games, earn points, and learn about real scientists and their discoveries. One small step for robots, one giant leap for HEXBUG!

### *Product Specs:*

- Product Length: 1.75 inches
- Product Width: .5 inches
- Product Height: .75 inches
- Product Weight: .25 ounces

The **HEXBUG Nano Newton Collection** is available in an assortment of colors and patterns. One button cell battery AG13 (LR44) is included with each

- Pricing varies by country
